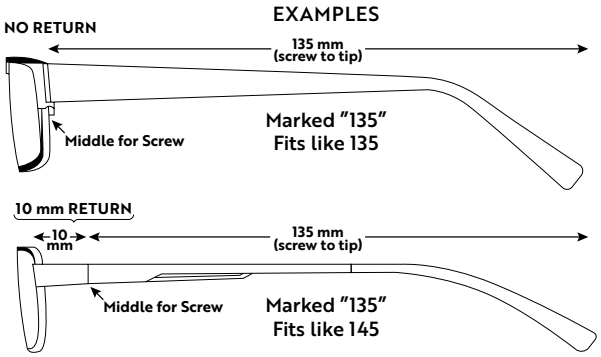
FITTING VALUE OVER MEASURED TEMPLE LENGTH



All Zyloware frames are measured and marked according to ANSI standards, from hinge screw to tip, as shown. However, because of the endpiece "return" on some frame designs, the "fitting value" is greater than the measured length.

In the example above, the temple with the return will fit more like a 145 mm temple than a 135 mm temple. A frame without a "return" will fit true to the marked size.
